Fluid and electrolyte imbalances Fluid and electrolyte balance is essential for health. Many factors, such as illness, injury, surgery, and treatments, can disrupt a patient's fluid and electrolyte balance. Even a patient with a minor illness is at risk for fluid and electrolyte imbalance.

Care for patients with fluid and electrolytes imbalance

Intravascular (IV) fluid is what most people think of when they say "body fluid." It's the blood in your arteries and veins. It supplies oxygen and nutrients to the body. It's what trauma victims "bleed out." In total, it's roughly about 3 liters. What about the remaining 75% of the extracellular fluid? This fluid is called interstitial fluid.
