Differential Equation - Definition, Types, Applications ...

General and Standard Form •The general form of a linear first-order ODE is $y' + P(x)y = Q(x)$. •In this equation, if $P(x) = 0$, it is no longer an differential equation and so y' cannot be 0; and if $Q(x) = 0$, it is a variable separated ODE and can easily be solved by integration, thus in this chapter
